

PRECISE FOOTING SYSTEM

- the system can handle any width of footing required
- lightweight and easy to transport
- can be used in any soil conditions
- hinged corners and steps are not a problem
- stackable for deep footing situations
- our aluminum footing form will speed up your setting time as well as stripping time
- this lightweight system is designed to allow footings to be set without staking the forms

Insertion of the support spacer bar allows depth of footing to be set.

The corners slide and lock into place with ease.

The adjustable spacer allows for easy width variations.

Forms are quickly joined with a simple U-Connector lock
